1 Scope

This Bluetooth document contains the Test Suite Structure (TSS) and test cases focused on verifying that different devices can exchange data with each other about their supported capabilities and attributes, referred to as Interoperable Product Testing.

- For traditional Bluetooth profiles operating only over the BR or BR/EDR transport, the exchange occurs over SDP.
- For services and profiles defined to operate over the Bluetooth LE transport, the exchange occurs over GATT, and when such specifications may operate also over either the BR/EDR transport in addition to the LE transport, then a combination of GATT and SDP is used.
- For Bluetooth Mesh network capabilities, the data exchanged is composition data.

Tests defined herein rely on the respective procedures to query for SDP data, GATT database records, or Mesh composition data, aiming to provide a high probability of air interface interoperability between the tested implementation and other manufacturers' Bluetooth devices that support X2Core specifications.

While similar in name, this IOPT document serves a different purpose and is not to be confused with IOP validation of draft specifications that occurs in the Bluetooth SIG specification-development process.

2.2 Definitions

In this Bluetooth document, the definitions from [1] and [5] apply.

Certain terms that were identified as inappropriate have been replaced. For a list of the original terms and their replacement terms, see the Appropriate Language Mapping Tables document [7].

2.3 Acronyms and abbreviations

In this Bluetooth document, the definitions, acronyms, and abbreviations from [1] and [5] apply.

3 Test Suite Structure (TSS)

3.1 Overview

Several mechanisms exist to allow a Bluetooth device to determine the capabilities of a remote device. This Test Suite varies from other Test Suites in that it looks at the collection of supported specifications within an IUT and how it exposes the supported profiles, services, or mesh model functionality to different devices over the air.

For multiple supported profiles, services, or mesh models, an IUT may not have a static set of data in available SDP records or the GATT database or the Mesh Composition data, which is important to keep in mind when exercising the test cases contained in this Test Suite.

The supported capabilities may be enabled by:

- Running overlapping profiles where one within a set of alternative applications is chosen
- Running non-overlapping profiles with multiple applications running simultaneously

An example of an overlapping profile is a phone that supports the Personal Area Networking Profile (PAN) in both the NAP and PANU roles, but not simultaneously. The presence of an external network determines whether the phone will act in a particular role. When connecting and re-connecting to a remote device, the IUT needs to decide which is the appropriate profile role to invoke to expose support for the remote device.

An example of non-overlapping profiles is a headset that supports the Hands-Free Profile (HFP) HF role, the Advanced Audio Distribution Profile (A2DP) Sink role, and the Hearing Aid Profile (HAP) unicast client. A remote device can determine these supported services and establish a connection according to the requirements of the individual specifications.

3.2 Service Discovery (SDP)

Usually on first connection, devices browse all SDP services, or if the remote device does not support browsing, they query directly for each of the services that the local device supports and then cache the results. This means that before connecting to the first remote service, the local device usually has a cache with information on all the services the remote device supports.

Since an SDP query requires an L2CAP channel and connecting to a service also requires an L2CAP channel, for a device that has cached SDP records, it is likely to be faster to simply attempt to connect to a second service rather than reconnect to SDP. If the cached SDP record says that the service is supported but connecting to the service fails, then an error code will be returned. Code 0x0004 “No resources available” will make the local device deduce that the remote device has run out of resources to support the second connection, while code 0x0002 “PSM not supported” indicates that the remote device does not allow this profile.

There is no requirement to support the behavior described above. A device could perform an SDP query for one service only, then perform a second query when it tries to connect to a second service; however, it should be noted that a device may use a dynamic SDP database, and therefore the service record may not reflect current resources available. Thus, even if an SDP query is performed immediately before connecting to a service, the service may not be available for use.

It is useful to test that a device responds with a service record for each claimed profile but does not give a service record for capabilities not claimed.

Since an SDP server can send its response using the continuation state parameter, SDP clients need to be capable of handling this situation. On the other hand, if the server does not support use of the

continuation state parameter and the response cannot fit in one SDP PDU, then the client will have a problem interpreting the response.

3.2.1 Class-of-Device (CoD)

Class-of-Device is one of the attributes that can be associated with a service record in SDP and is therefore a parameter that may be received during the device discovery procedure on the BR/EDR physical transport, indicating contextual information about the device. The CoD parameter is only used on BR/EDR and BR/EDR/LE devices using the BR/EDR physical transport.

The CoD comprises two main groups of information: Service Class and Device Class.

- The *Service Class* field is a bitmask where each bit corresponds to a high-level generic category of service class. Multiple bits can be set.
- The *Device Class* field indicates major device class and may indicate minor device class. Only one major device class can be indicated at any point in time, and it is used to indicate the main function of a device. The minor device class is to be interpreted only in the context of the major device class (but independent of the service class). Thus, the meaning of the bits may change, depending on the value of the major device class.

The range of specificity for CoD varies greatly between profiles. Some profiles mandate specific values for service class and major device class. Some profiles recommend potential values. Some profiles note that there is no obvious correlation between CoD values and the specification, since many types of devices can implement the specification.

The assigned numbers [\[2\]](#) lists the defined CoD values.

3.3 GATT Database (GATT DB)

The GATT DB is central to Bluetooth Low Energy (LE), including LE Audio, and LE device services and profiles. Within the GATT DB, services are composed of characteristics, which represent specific data points or features of a service. The GATT DB is dynamic and configurable, allowing devices to expose their capabilities and attributes based on their current state and functionality. This adaptability is essential for LE devices that may have varying features or operate in different modes.

In a GATT server, the GATT DB is the structured repository for attributes and data related to its services and characteristics. The GATT server uses the GATT DB to respond to client requests, manage attribute values, and provide the functionality defined by its profiles and services.

The GATT client queries the GATT DB of a GATT server to discover, read, write, and manage attributes and their data, thereby allowing it to interact with the server's attributes based on the requirements of its application and use case.

3.4 Mesh Protocol and Mesh Models

Mesh devices may expose a complex structure of elements and models that is specific to its intended use case and therefore must undergo additional testing to verify that the chosen model instance distribution follows the requirements of the Mesh specifications. Mixing certain combinations of multi-instance cross-element models can sometimes become complicated, and an incorrect structure may affect the device's ability to be properly integrated in a Mesh network.

Additionally, several critical features and functionalities (such as those related to security) may heavily rely on a correct integration of qualified protocol stacks into complete end-product software solutions, and it is necessary to rerun associated test cases on the final firmware to confirm that hardware and software modules external to the qualified stacks work properly to maintain the intended behaviors.

3.5 LE Audio

Low Energy (LE) Audio application profiles may specify configurations and settings of parameters and procedures that are defined in lower-level specifications. The objective of testing a Bluetooth LE Audio Application Profile is to enable wireless audio products that achieve application interoperability.

Currently, the Core specification has no method for the Host to set some of the required Controller behavior over HCI, meaning that the application profile relies solely on what the Controller chooses.

The only way to ensure that a given Host/Profile Layer with a given Controller can actually meet the LE Audio application profile requirements is to add IOPT testing because the BAP profile and Controller might very well be qualified independently, and the key is that when combined into a Core Complete design, all the design elements work together to meet said requirements.

3.6 Test Strategy

The test objectives are to verify the supported profiles and services of the IUT and enable interoperability between Bluetooth Hosts on different devices. The testing approach covers requirements associated with SDP records, GATT database records, and Mesh Composition data in the corresponding specification and matches these to the support of the IUT as described in the ICS. Any defined test herein is applicable to the IUT if the ICS logical expression defined in the Test Case Mapping Table (TCMT) evaluates to true.

The test system provides an implementation of the Radio Controller and the parts of the Host needed to perform the test cases defined in this Test Suite. A Lower Tester acts as the IUT's peer device and interacts with the IUT over-the-air interface. For some test cases, it is necessary to stimulate the IUT from an Upper Tester. In practice, this could be implemented as a special test interface, a Man Machine Interface (MMI), or another interface supported by the IUT.

This Test Suite contains Valid Behavior (BV) tests complemented with Invalid Behavior (BI) tests where required.

This Test Suite uses table-driven test cases that are defined in other TS documents for GATT-based services, traditional profiles, and Mesh protocol that build on a generic test case structure defined in the GATT TS [8], the MESH TS [9], and the SDP TS [10].

The generic test case structure of the GATT TS is referred to as Generic GATT Integrated Tests (GGIT). The generic test case structure of the SDP TS is referred to as Generic SDP Integrated Tests (GSIT).

4 Test cases (TC)

4.1 Introduction

4.1.1 Test case identification conventions

Test cases are assigned unique identifiers per the conventions in [5]. The convention used here is:
<IOPT>/<spec abbreviation>/<IUT role>/<class>/<feat>/<func>/<subfunc>/<cap>/<xx>-<nn>-<y>.

Identifier Abbreviation	IOPT Identifier <IOPT>
IOPT	Interoperable Product Testing Test Suite
Identifier Abbreviation	Spec Identifier <spec abbreviation>
The abbreviations for the respective X2Core specifications are used in this position; to avoid this becoming an exceedingly long list, they are not explicitly listed here.	
Identifier Abbreviation	Role Identifier <IUT role>
The abbreviations for the roles in the X2Core specifications are used in this position; to avoid this becoming an exceedingly long list, they are not explicitly listed here.	
Identifier Abbreviation	Reference Identifier <GGIT test group>
SGGIT	Server Generic GATT Integrated Tests
Identifier Abbreviation	Feature Identifier <feat>
COD	Class-of-Device
GATTDB	GATT database verification
SDP	Validate SDP Record
SDPR	SDP record verification
SFC	SDP Future Compatibility

Table 4.1: IOPT TC feature naming conventions

4.1.2 Conformance

When conformance is claimed for a particular specification, all capabilities are to be supported in the specified manner. The mandated tests from this Test Suite depend on the capabilities to which conformance is claimed.

The Bluetooth Qualification Program may employ tests to verify implementation robustness. The level of implementation robustness that is verified varies from one specification to another and may be revised for cause based on interoperability issues found in the market.

Such tests may verify:

- That claimed capabilities may be used in any order and any number of repetitions not excluded by the specification
- That capabilities enabled by the implementations are sustained over durations expected by the use case
- That the implementation gracefully handles any quantity of data expected by the use case
- That in cases where more than one valid interpretation of the specification exists, the implementation complies with at least one interpretation and gracefully handles other interpretations
- That the implementation is immune to attempted security exploits

A single execution of each of the required tests is required to constitute a Pass verdict. However, it is noted that to provide a foundation for interoperability, it is necessary that a qualified implementation consistently and repeatedly pass any of the applicable tests.

In any case, where a member finds an issue with the test plan generated by the Bluetooth SIG qualification tool, with the test case as described in the Test Suite, or with the test system utilized, the member is required to notify the responsible party via an erratum request such that the issue may be addressed.

4.1.3 Pass/Fail verdict conventions

Each test case has an Expected Outcome section. The IUT is granted the Pass verdict when all the detailed pass criteria conditions within the Expected Outcome section are met.

The convention in this Test Suite is that, unless there is a specific set of fail conditions outlined in the test case, the IUT fails the test case as soon as one of the pass criteria conditions cannot be met. If this occurs, then the outcome of the test is a Fail verdict.

4.2 Class of Device

IOPT/SR/COD/BV-01-I [Class-of-Device]

- Test Purpose

Verify that the IUT transmits a Class of Device pattern matching claimed profiles and roles.
- Reference

[1] GAP 3.2.4

[2] Class of Device
- Initial Condition
 - The ICS statement for implemented profiles and roles is known to the Lower Tester.
 - The IUT is acting in the Baseband role as described in [Table 4.2](#) for the supported profile(s) and role(s) as listed in the table that the IUT claims support. For example, if the IUT only supports profile and role pairs in the IUT as Baseband Central role row, (e.g., PAN - PANU role, BAP - Unicast Client role, CCP - Call Control Server role, and CAP - Initiator role), then the IUT executes this test case using the IUT as Central in terms of test steps and initial conditions.
 - If the IUT is Peripheral:
 - The IUT is in either General or Limited discoverable mode.
 - The Lower Tester is Central and initiator of the inquiry procedure.
 - If the IUT is Central:
 - The Lower Tester is in Page Scan mode.
 - The IUT is initiator of the Page procedure.

- Test Procedure
 1. Perform either alternative 1A or 1B depending on the IUT's supported profile and role pairing.
 Alternative 1A (The IUT supports at least 1 profile and role pairing in the Peripheral row of [Table 4.2.](#)):
 - 1A.1 The IUT is Baseband Peripheral. The Lower Tester sends inquiry request messages (ID-packets) after the Upper Tester has ordered the IUT to go into a discoverable mode.
 Alternative 1B (The IUT supports only profile and role pairings in the Central row of [Table 4.2.](#)):
 - 1B.1 The IUT is Baseband Central. The IUT sends paging request messages (ID-packets) to the Lower Tester after the Upper Tester has ordered the IUT to initiate the connection establishment procedure.

IUT Baseband role	Supported profile – supported role
Peripheral	3DSP - 3DD role, A2DP - Sink role, A2DP - Source role, AVRCP - Controller role, BPP - Printer role, DUN - Gateway role, FTP - Server role, GNSS - Server role, HCRP - Server role, HFP - HF role, HID v1.1 or later - HID Device role, HSP - HS role, OPP - Server role, PAN - GN role, PAN - NAP role, SAP - Server role, SYNC - IrMC Server role, VDP - Sink role, VDP - Source role, BAP - Unicast Server role (ASCS Server, PACS Server), BAP - Broadcast Sink role (PACS Server), BAP - Scan Delegator role (BASS Server), CAP - Acceptor role, CAP - Commander role, VCP - Volume Renderer role, MICP - Microphone Device role, CCP - Call Control Client role, MCP - Media Control Client role
Central	PAN - PANU role, SYNC - IrMC Client role, BAP - Unicast Client role, BAP - Broadcast Assistant role, CAP - Initiator role, VCP - Volume Controller role, MICP - Microphone Controller role, CCP - Call Control Server role, MCP - Media Control Server role

Table 4.2: IUT Baseband role for Class-of-Device tests

- Expected Outcome

Pass verdict

In Step 1A.1, the IUT answers an inquiry request from the Lower Tester with the FHS packet.

In Step 1B.1, the Lower Tester answers a paging request from the IUT with page response messages (ID-packets), and the IUT responds with page response messages (FHS packets) containing the Class of Device field.

The Class of Device field is properly formatted according to [\[2\]](#).

The Major Service Class, Major Device Class, and Minor Device Class bit patterns have valid values, and it is confirmed by the user that the values obtained by the Lower Tester are expected.

In addition, the following profile-specific requirements are verified by the Lower Tester:

- For an IUT supporting the 3DSP 3DD role, a warning is displayed if any of the following bits are not set (requirement applies only to legacy Proximity Association):
 - Either the bit corresponding to “Capturing” in the Major Service Class part of the Class of Device field or no bits are specified in the Major Service Class part of the Class of Device field (value of 00000000000b)

- The bits corresponding to “Audio/Video” in the Major Device Class part of the Class of Device field
- The bits corresponding to “Video Display and Loud Speaker” in the Minor Device Class part of the Class of Device field
- For an IUT supporting the A2DP Sink role:
 - The bit corresponding to “Rendering” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the A2DP Source role:
 - The bit corresponding to “Capturing” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the AVRCP Controller role, a warning is displayed if any of the following bits are not set (requirement only applies to stand-alone remote controllers):
 - The bits corresponding to “Peripheral” in the Major Device Class part of the Class of Device field
 - The bits corresponding to “Remote Control” in the Minor Device Class part of the Class of Device field
- For an IUT supporting the BPP Printer role:
 - The bits corresponding to “Rendering” and “Object Transfer” in the Major Service Class part of the Class of Device field are set.
 - If the bits corresponding to “Imaging” in the Major Device Class part of the Class of Device field are set, then the “Printer” bit is set in the Minor Device Class part of the Class of Device field.
- For an IUT supporting the DUN Gateway role:
 - The bits corresponding to “Telephony” and “Networking” in the Major Service Class part of the Class of Device field are set.
- For an IUT supporting the FTP Server role:
 - The bit corresponding to “Object Transfer” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the GNSS Server role:
 - The bit corresponding to “Positioning” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the HCRP Server role:
 - The bits corresponding to “Rendering” and/or “Capturing” in the Major Service Class part of the Class of Device field are set.
 - If the bits corresponding to “Imaging” in the Major Device Class part of the Class of Device field are set, then the “Printer” and/or “Scanner” bits are set in the Minor Device Class part of the Class of Device field.
- For an IUT supporting the HFP HF role:
 - The bit corresponding to “Audio” in the Major Service Class part of the Class of Device field is set.

- For an IUT supporting the HID v1.1 or later HID Device role, a warning is displayed if any of the following bits are not set (requirement applies only to devices supporting only the HID profile):
 - The bits corresponding to “Peripheral” in the Major Device Class part of the Class of Device field
 - The bits 6 and 7 in the Minor Device Class part of the Class of Device field correspond to the type of HID device implemented (i.e., mouse, keyboard, or combo mouse/keyboard devices)
- For an IUT supporting the HSP HS role:
 - The bit corresponding to “Audio” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the OPP Server role:
 - The bit corresponding to “Object Transfer” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the PAN GN, NAP, or PANU role:
 - The bit corresponding to “Networking” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the SAP Server role:
 - The bit corresponding to “Telephony” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the SYNC IrMC Client or IrMC Server role:
 - The bit corresponding to “Object Transfer” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the VDP Sink role:
 - The bit corresponding to “Rendering” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting the VDP Source role:
 - The bit corresponding to “Capturing” in the Major Service Class part of the Class of Device field is set.
- For an IUT supporting Audio Input Control Service (AICS), Audio Stream Control Service (ASCS), Broadcast Audio Scan Service (BASS), Common Audio Service (CAS), Media Control Service (MCS), Generic Media Control Service (GMCS), Microphone Control Service (MICS), Published Audio Capabilities Service (PACS), Telephone Bearer Service (TBS), Generic Telephone Bearer Service (GTBS), Volume Control Service (VCS), or Volume Offset Control Service (VOCS) over the BR/EDR transport:
 - The bit corresponding to “LE audio” in the Major Service Class part of the Class of Device field is set.
- Notes

The Limited Discoverable service class bit is set if the limited discoverable mode is used.

4.3 Traditional specification IOPT tests

This section defines the IOPT test procedures that integrate various Generic SDP Integrated Tests (GSIT) TCIDs that are required to be executed for each applicable Traditional profile supported by the IUT.

4.3.1 IOPT SDPR Server tests

- Test Purpose
Verify that the SDP record is present and contains all the attributes required by the profile according to [Table 4.3](#).
- Reference
See [Table 4.3](#).
- Initial Condition
 - The IUT is discoverable and connectable and any actions to expose the target SDP record have been taken.
 - An L2CAP connection for SDP exists between the IUT and the Lower Tester.
- Test Case Configuration

Table 4.3: IOPT SDPR tests

- Test Procedure
 1. The Lower Tester searches for the service record and the attributes in the generic SDP-based test case listed in the test case column of [Table 4.3](#) from the referenced Test Suite (the Generic SDP Integrated Tests and structure are defined in Section 6.3, Server test procedures (SGSIT), in [10].)

- Expected Outcome

Pass verdict

If the referenced SGSIT test case is “Baseline” then the requested attribute ID is present and the types and any required values are as expected.

If the referenced SGSIT test case is “Baseline IF” followed by an ICS reference or a Boolean logic expression of ICS items, then the requested attribute ID is only present if the corresponding ICS selections are fulfilled and the types and any required values are as expected.

If the referenced SGSIT test case is “Additional” then the requested attribute ID does not need to be present in the IUT’s SDP record. If it is present, the types and any required values are as expected.

4.3.2 IOPT SFC Server tests

- Test Purpose

Verify that the IUT is able to successfully connect to the Lower Tester with a future (not yet adopted) profile version exposed in its SDP record according to [Table 4.4](#).

- Reference

See [Table 4.4](#).

- Initial Condition

- The Lower Tester satisfies the initial conditions of the referenced test cases as specified in the individual TS documents.

- Test Case Configuration

Table 4.4: IOPT SFC tests

- Test Procedure
 1. The IUT executes the test listed in the test case column of [Table 4.4](#) from the referenced Test Suite (the Generic SDP Integrated Tests and structure are defined in Section 6.4, Client test procedures (CGSIT), in [\[10\]](#).)

- Expected Outcome

Pass verdict

For every test case the pass verdict is the same as that in the referenced test case.

4.4 GATT-based and GATT-based Audio specification IOPT tests

This section defines the IOPT test procedures that integrate various Generic SDP Integrated Tests (GSIT) TCIDs that are required to be executed for each applicable GATT-based and GATT-based audio service supported by the IUT.

4.4.1 IOPT GATTDB tests

- Test Purpose

Verify that the GATT service declaration is present and contains all the characteristics and their descriptors required by the service according to [Table 4.5](#).
- Reference

See [Table 4.5](#).
- Initial Condition
 - The transport and L2CAP channel are set up according to the preambles in [\[8\]](#).
- Test Case Configuration

Table 4.5: IOPT GATTDB tests

- Test Procedure
 1. The Lower Tester searches for IUT's GATT service database for the services, characteristics, and descriptors specified in the generic GATT-based test case listed in the test case column of [Table 4.5](#) from the referenced Test Suite (the Generic GATT Integrated Tests and structure are defined in Section 6.3, Server test procedures (SGGIT), in [\[8\]](#).)

- Expected Outcome

Pass verdict

If the referenced SGGIT test case is "Baseline" then the requested service/characteristic/descriptor is present and the properties, length, types and any required values are as expected.

If the referenced SGGIT test case is "Baseline IF" followed by an ICS reference or a Boolean logic expression of ICS items, then the requested service/characteristic/descriptor is only present if the corresponding ICS selections are fulfilled and the properties, length, types and any required values are as expected.

If the referenced SGGIT test case is "Additional" then the requested service/characteristic/descriptor does not need to be present in the IUT's database. If it is present, the properties, length, types and any required values are as expected.

4.4.2 IOPT SGSIT SDP tests

- Test Purpose

Verify that the SDP record is present and contains all the attributes required by the service according to [Table 4.6](#).
- Reference

See [Table 4.6](#).
- Initial Condition
 - The IUT is discoverable and connectable and any actions to expose the target SDP record have been taken.
 - An L2CAP connection for SDP exists between the IUT and the Lower Tester.
- Test Case Configuration

Table 4.6: IOPT SGSIT SDP tests

- Test Procedure
 1. The test listed in the test case column of [Table 4.6](#) is executed from the referenced Test Suite (the Generic GATT Integrated Tests and structure are defined in Section 6.3, Server test procedures (SGGIT), in [\[8\]](#).)

- Expected Outcome

Pass verdict

For every test case the pass verdict is the same as that in the referenced test case.

4.4.3 IOPT MESH tests

- Test Purpose

Verify that the Mesh tests referenced have the expected outcome according to [Table 4.7](#).
- Reference

See [Table 4.7](#).

- Initial Condition
 - The initial conditions are the same as those in the referenced test case.
- Test Case Configuration

TCID	Reference	Test Cases
IOPT/MESH/NODE/BV-01-I [Provisioning and reprovisioning]	[9] 6.1	MESH/NODE/BV-01-C
IOPT/MESH/NODE/BV-02-I [Mesh device composition data]	[9] 6.1	MESH/NODE/BV-02-C
IOPT/MESH/NODE/BV-03-I [Network message cache and replay protection]	[9] 6.1	MESH/NODE/BV-03-C

Table 4.7: IOPT Mesh tests

- Test Procedure
 1. The test listed in the test case column of [Table 4.7](#) is executed from the referenced Test Suite.
- Expected Outcome

Pass verdict

For every test case the pass verdict is the same as that in the referenced test case.

4.4.4 LE Audio application profile tests

- Test Purpose

Verify that the requirements specified by LE Audio application profiles are tested per [Table 4.8](#) and are met by a Core Complete design.
- Reference

See [Table 4.8](#).
- Initial Condition
 - The initial conditions are the same as those in the referenced test case.
- Test Case Configuration

TCID	Reference	Test Cases
IOPT/PBP/PBK/RCV/BV-07-I [Receiving Public Broadcast Announcements, Standard Quality, 24_2_1, Encrypted, LE 2M PHY – PBK]	[123] 4.4.1.1	PBP/PBK/RCV/BV-07-C

TCID	Reference	Test Cases
IOPT/PBP/PBA/RCV/BV-06-I [Receiving Public Broadcast Announcements, Standard Quality, Encrypted, LE 2M PHY – PBA]	[123] 4.4.2.1	PBP/PBA/RCV/BV-06-C

Table 4.8: IOPT LE Audio application profile tests

- Test Procedure
 1. The test listed in the test case column of [Table 4.8](#) is executed from the referenced Test Suite.
- Expected Outcome

Pass verdict

For every test case, the Pass verdict is the same as that in the referenced test case.

5 Test case mapping

The Test Case Mapping Table (TCMT) maps test cases to specific requirements in the individual specification ICS documents and can map to test cases defined in the individual TS documents corresponding to the referenced specifications. The IUT is tested in all roles for which support is declared in the ICS document(s).

The columns for the TCMT are defined as follows:

Item: Contains a logical expression based on specific entries from the associated ICS document. Contains a logical expression (using the operators AND, OR, NOT as needed) based on specific entries from the applicable ICS document(s). The entries are in the form of y/x references, where y corresponds to the table number and x corresponds to the feature number as defined in the ICS document for either the IOPT ICS document [3] or the ICS document in the referenced specification abbreviation.

If a test case is mandatory within the respective layer, then the y/x reference is omitted.

Feature: A brief, informal description of the feature being tested.

Test Case(s): The applicable test case identifiers are required for Bluetooth Qualification if the corresponding y/x references defined in the Item column are supported. Further details about the function of the TCMT are elaborated in [5].

For the purpose and structure of the ICS/IXIT, refer to [5].

PAMS 1/1	GATT-based service SDP record verification – PAMS	IOPT/PAMS/SR/SGGIT/SDP/BV-01-I
PASS 1/1 OR PASS 1/2	GATT service verification – PASS	IOPT/PASS/SR/GATTDB/BV-01-I
PBP 17/2 AND PBP 18/1	Receiving Public Broadcast Announcements, Standard Quality, Encrypted, LE 2M PHY – PBA	IOPT/PBP/PBA/RCV/BV-06-I
PBP 12/1 AND PBP 14a/1	Receiving Public Broadcast Announcements, Standard Quality, 24_2_1, Encrypted, LE 2M PHY – PBK	IOPT/PBP/PBK/RCV/BV-07-I
PLXS 1/1 OR PLXS 1/2	GATT service verification – PLXS	IOPT/PLXS/SEN/GATTDB/BV-01-I
PLXS 1/1	GATT-based service SDP record verification – PLXS	IOPT/PLXS/SEN/SGGIT/SDP/BV-01-I
RAS 1/1 OR RAS 1/2	GATT service verification – RAS	IOPT/RAS/SR/GATTDB/BV-01-I
RCS 2/1 OR RCS 2/2	GATT service verification – RCS	IOPT/RCS/SR/GATTDB/BV-01-I
RSCS 1/1 OR RSCS 1/2	GATT service verification – RSCS	IOPT/RSCS/SEN/GATTDB/BV-01-I
RSCS 1/1	GATT-based service SDP record verification – RSCS	IOPT/RSCS/SEN/SGGIT/SDP/BV-01-I
RTUS 1/1 OR RTUS 1/2	GATT service verification – RTUS	IOPT/RTUS/SR/GATTDB/BV-01-I
SCPS 1/1 OR SCPS 1/2	GATT service verification – SCPS	IOPT/SCPS/SR/GATTDB/BV-01-I
TBS 1/1 OR TBS 1/2	GATT service verification – TBS	IOPT/TBS/SR/GATTDB/BV-01-I
TBS 1/1	GATT-based service SDP record verification – TBS	IOPT/TBS/SR/SGGIT/SDP/BV-01-I
TDS 2/1 OR TDS 2/2	GATT service verification – TDS	IOPT/TDS/SR/GATTDB/BV-01-I
TDS 2/2	GATT-based service SDP record verification – TDS	IOPT/TDS/SR/SGGIT/SDP/BV-01-I
TMAP 1/8	GATT service verification – TMAP	IOPT/TMAP/SR/GATTDB/BV-01-I

Item	Feature	Test Case(s)
TMAP 1/8 AND TMAP 2/1	GATT-based service SDP record verification – TMAP	IOPT/TMAP/SR/SGGIT/SDP/BV-01-I
TPMSS 2/1	GATT service verification – TPMSS	IOPT/TPMSS/SR/GATTDB/BV-01-I
TPS 1/1 OR TPS 1/2	GATT service verification – TPS	IOPT/TPS/SR/GATTDB/BV-01-I
UDS 2/1 OR UDS 2/2	GATT service verification – UDS	IOPT/UDS/SR/GATTDB/BV-01-I
UDS 2/1	GATT-based service SDP record verification – UDS	IOPT/UDS/SR/SGGIT/SDP/BV-01-I
VAS 2/1 OR VAS 2/2	GATT service verification – GVAS	IOPT/GVAS/SR/GATTDB/BV-01-I
VAS 11/1 OR VAS 11/2	GATT service verification – VAS	IOPT/VAS/SR/GATTDB/BV-01-I
VCS 1/1 OR VCS 1/2	GATT service verification – VCS	IOPT/VCS/SR/GATTDB/BV-01-I
VCS 1/1	GATT-based service SDP record verification – VCS	IOPT/VCS/SR/SGGIT/SDP/BV-01-I
VOCS 1/1 OR VOCS 1/2	GATT service verification – VOCS	IOPT/VOCS/SR/GATTDB/BV-01-I
VOCS 1/1	GATT-based service SDP record verification – VOCS	IOPT/VOCS/SR/SGGIT/SDP/BV-01-I
WSS 2/1 OR WSS 2/2	GATT service verification – WSS	IOPT/WSS/SEN/GATTDB/BV-01-I
WSS 2/1	GATT-based service SDP record verification – WSS	IOPT/WSS/SEN/SGGIT/SDP/BV-01-I

Table 5.1: Test case mapping

6 Revision history and acknowledgments

Revision History

Publication Number	Revision Number	Date	Comments
	1.0	2004-03-25	Changed document numbering and revision number to conform to the legacy system.
	1.0.1	2004-06-22	Changed page numbering to have part start on page 1.
	1.0.2	2004-06-28	Replaced Abbreviation Section text with reference to Volume 1 Part A, Section 3.2.
	1.0.3	2004-12-03	Added Disclaimer and Copyright Notice. Incorporated TSE 681 for document preface. Incorporated TSE 682 for IOPT/COD/BV-01-I (legacy test case ID TP/COD/BV-01-I). Incorporated TSE 683 for IOPT/SDSS/BV-02-I (legacy test case ID TP/SDSS/BV-02-I). Incorporated TSE 684 for IOPT/SDAS/BV-03-I (legacy test case ID TP/SDAS/BV-03-I). Made editorial and technical changes.
	2.E.4	2004-12-13	Editorial changes.
0	2.0.E.4	2005-03-21	Corrected document revision number.
	2.0.E.5r0	2005-08-24	TSE 762: Corrected cover page to "1.2 or later" and edited TCMT to refer to 1.2 or later ICS
1	2.0.E.5	2005-09-29	Prepare for publication.
	2.0.E.6r0	2006-04-03	TSE 840: IOPT/COD/BV-01-I (legacy test case ID TP/COD/BV-01-I) Selection Expression -Removed TP Definition Conventions (duplicate of TSTO) -Removed "Uncertainties;" moved content to Notes section.
2	2.0.E.6	2006-06-05	Prepare for publication.
	2.1.E.0r0	2008-09	TSE 2584 Add new test case IOPT/HFP/AG/COD/BV-02-I (legacy test case ID TP/COD/BV-02-I)
3	2.1.E.0	2008-12-04	Prepare for publication.
	4.0.0r0	2011-11-04	TSE 4276: IOPT/SDR/BV-04-I (legacy test case ID TP/SDR/BV-04-I): TCMT
4	4.0.0	2012-03-30	Prepare for publication.
	4.0.1r00	2016-10-14	TSE 7679: Modified References section and added new references [4] - [26]. Added new section "Connection Successful Regardless of SDP Version". Added mapping for 27 test cases.
	4.0.1r01	2016-10-28	Updated to latest template. Converted to new Test Case ID conventions as defined in TSTO v4.1
5	4.0.1	2016-12-13	Approved by BTI. Prepared for TCRL 2016-2 publication.

Publication Number	Revision Number	Date	Comments
	4.0.2r00	2017-09-05	TSE 9721: Added initial condition, revised the test procedure, revised the pass verdict, and added notes in the Connection Successful Regardless of SDP Version section. Updated the TCMT for IOPT/CL/HFP-HF/SFC/BV-14-I and IOPT/CL/VDP-SNK/SFC/BV-27-I.
	4.0.2r01	2017-09-29	TSE 9152: Replaced “Service Level Connection” with “profile-specific connection” in the Connection Successful Regardless of SDP Version section test procedure and expected outcome.
6	4.0.2	2017-11-28	Approved by BTI. Prepared for TCRL 2017-2 publication.
	4.0.3r00	2018-02-16	TSE 10117 (rating 2): Revised mapping to change DUN 1/1 to DUN 1/2 for IOPT/CL/DUN-DT/SFC/BV-08-I in TCMT.
7	4.0.3	2018-07-01	Approved by BTI. Prepared for TCRL 2018-1 publication.
	p8r00–r01	2021-04-03 – 2021-06-09	TSE 10868 (rating 2): Added back missing pass verdict to IOPT/CL/SDR/BV-04-I. Added references to IXIT in the tests in the “Connection Successful Regardless of SDP Version” section and updated the initial conditions. Rewrote the test procedure for IOPT/CL/HFP-AG/COD/BV-02-I using the current accepted conventions. Replaced outdated roles with “Central” and “Peripheral” in IOPT/SR/COD/BV-01-I. TSE 15815 (rating 1): Deleted TC IOPT/CL/MPS/SFC/BV-19-I, as it is not required. Updated TCMT accordingly. Template-related editorials, including assigning p7 to previous v4.0.3.
8	p8	2021-07-13	Approved by BTI on 2021-06-03. Prepared for TCRL 2021-1 publication.
	p8ed2r00	2021-07-26	TSE 17288 (rating 1): Corrected an A2DP item and editorials to HID v1.1 abbreviation in the TCMT.
	p8 edition 2	2021-09-28	Approved by BTI on 2021-09-27. Prepared for edition 2 publication.
	p9r00–r17	2023-09-29 – 2024-05-20	TSE 18944 (rating 4): Overhaul of the IOPT TS to align with the new Qualification Program. Deleted old-style TCs and added new IOPT TCs for all affected layers. TSE 23230 (rating 4): Added Mesh Protocol and Mesh Models section to the TSS and added TCs IOPT/MESH/NODE/BV-01-I – -03-I. Details added to Scope, SDP (alignment with new SDP.TS), CoD. New section added on GATT DB. Shortened the TC-ID list to remove long list of X2Core spec- and role-abbreviations. TSE 24239 (rating 4): Updated the TCMT entry for IOPT/SR/COD/BV-01-I. Made the Pass criteria for IOPT/SR/COD/BV-01-I more specific.

Publication Number	Revision Number	Date	Comments
			TSE 24454 (rating 4): Added IOPT SDPR Server, IOPT SFC Server, and IOPT SDPR test tables new TCIDs as necessary to support generic IOPT SDP-based testing. Updated the TCMT and TCRL accordingly. Included DID, HFP, HID, and HID11 GSIT materials. Added/corrected material for the A2DP layer. Added material for the AVRCP, 3DSP, 3DSP, BPP, CTN, DUN, FTP, HCRP, HDP, HSP, MAP, OPP, PAN, PBAP, SAP, SPP, SYNC, and VDP layers. Updated SFC tests from -C to -I to align with established process. Updated the TCIDs in the tables to align with the TCIDs in the TCMT. Added GGIT test cases for recently converted layers. Removed IOPT/HFP/AG/COD/BV-02-I, which is now in the HFP TS as HFP/AG/COD/BV-02-C. Added the Baseline/Additional statements into the GATTDB tests. Updated the TCMT for IOPT/SR/COD/BV-01-I to use only existing ICS. TSE 24928 (rating 1): Added the test structure for the IOPT/MESH test cases.
9	p9	2024-07-01	Approved by BTI on 2024-05-22. Prepared for TCRL 2024-1 publication.
	p10r00	2024-08-20	TSE 26022 (rating 4): For IOPT/FTMS/SR/GATTDB/BV-01-I, updated the baseline for FTMS/SR/SGGIT/CHA/BV-01-C and added FTMS/SR/SGGIT/CHA/BV-16-C. For IOPT/LNS/SEN/GATTDB/BV-01-I, updated the baseline for LNS/SEN/SGGIT/CHA/BV-01-C and added LNS/SEN/SGGIT/CHA/BV-06-C. For IOPT/RSCS/SEN/GATTDB/BV-01-I, updated the baseline for RSCS/SEN/SGGIT/CHA/BV-02-C and added RSCS/SEN/SGGIT/CHA/BV-05-C. For IOPT/WSS/SEN/GATTDB/BV-01-I, updated the baseline for WSS/SEN/SGGIT/CHA/BV-01-C and added WSS/SEN/SGGIT/CHA/BV-03-C.
10	p10	2024-10-08	Approved by BTI on 2024-09-11. Prepared for TCRL 2024-2-addition publication.
	p11r00	2024-10-02	Incorporated IOPT-related CR supporting the IMDS v1.0 adoption.
11	p11	2024-10-22	Approved by BTI on 2024-10-13. IMDS v1.0 adopted by the BoD on 2024-10-15. Prepared for supporting publication.
	p12r00	2024-10-30	Incorporated IOPT-related CR supporting the RAS v1.0 adoption.
12	p12	2024-11-19	Approved by BTI on 2024-11-10. RAS v1.0 adopted by the BoD on 2024-11-12. Prepared for supporting publication.
	p13r00–r01	2024-11-19 – 2024-12-06	TSE 25717 (rating 2): Updated the Baseline/Additional column value for BAS/SR/SGGIT/CHA/BV-01-C in the IOPT GATTDB tests section. Deleted the following test cases because these TCs refer to deprecated versions in HSP and VDP:

Publication Number	Revision Number	Date	Comments
			HSP/HS/SGSIT/SERR/BV-01-C, HSP/HS/SGSIT/ATTR/BV-02-C, HSP/AG/SGSIT/ATTR/BV-06-C, VDP/SRC/SGSIT/ATTR/BV-02-C, and VDP/SNK/SGSIT/ATTR/BV-05-C.
13	p13	2025-02-18	Approved by BTI on 2024-12-18. Prepared for TCRL 2025-1 publication.
	p14r00-r01	2025-02-04 – 2025-04-03	TSE 26972 (rating 2): Updated the Baseline/Additional values for TCs BLS/SEN/SGGIT/CHA/BV-03-C – -05-C and -09-C. TSE 27022 (rating 2): Updated the Baseline/Additional value for ASCS/SR/SGGIT/CHA/BV-01-C and -02-C in the IOPT GATTDB tests table. TSE 27023 (rating 2): Updated the Baseline/Additional value for GMCS/SR/SGGIT/CHA/BV-02-C and -03-C in the IOPT GATTDB tests table. TSE 27024 (rating 2): Updated the Baseline/Additional value for MCS/SR/SGGIT/CHA/BV-02-C and -03-C in the IOPT GATTDB tests table. TSE 27032 (rating 2): Updated the Baseline/Additional value for VCS/SR/SGGIT/CHA/BV-03-C and added VCS/SR/SGGIT/CHA/BV-04-C in the IOPT GATTDB tests table. TSE 27036 (rating 2): Updated the Baseline/Additional value for TC BMS/SEN/SGGIT/CHA/BV-03-C. TSE 27038 (rating 2): Updated the Baseline/Additional values for TCs DIS/SR/SGGIT/CHA/BV-01-C – -09-C. TSE 27039 (rating 2): Updated the Baseline/Additional value for TCs GLS/SEN/SGGIT/CHA/BV-03-C, -04-C, and -06-C. TSE 27040 (rating 2): Updated the Baseline/Additional value for TCs HTS/SEN/SGGIT/CHA/BV-03-C – -07-C and HTS/SEN/SGGIT/DES/BV-01-C. TSE 27047 (rating 2): Updated the Baseline/Additional value for TCs IDS/SEN/SGGIT/CHA/BV-05-C, -07-C, -09-C, and -11-C. TSE 27048 (rating 2): Updated the Baseline/Additional value for TCs IMDS/SR/SGGIT/CHA/BV-01-C – -14-C. TSE 27049 (rating 2): Updated the Baseline/Additional value for TC IPS/SR/SGGIT/SER/BV-01-C. TSE 27050 (rating 2): Updated the Baseline/Additional value for TCs LNS/SEN/SGGIT/CHA/BV-03-C and -04-C. Corrected a typo in the TCID for LNS/SEN/SGGIT/SER/BV-01-C in the IOPT GATTDB tests table. TSE 27051 (rating 2): Updated the description of GATT-based TC IOPT/LNS/SEN/SGGIT/SDP/BV-01-I and updated the TCID for LNS/SEN/SGGIT/SDP/BV-01-C. TSE 27052 (rating 2): Updated the Baseline/Additional value for TC OTS/SR/SGGIT/CHA/BV-10-C.

Publication Number	Revision Number	Date	Comments
			TSE 27054 (rating 2): Updated the Baseline/Additional value for TCs TDS/SR/SGGIT/CHA/BV-02-C and TDS/SR/SGGIT/DES/BV-05-C. TSE 27063 (rating 2): Updated the Baseline/Additional value for TC BIP/SR/SGSIT/ATTR/BV-01-C. TSE 27064 (rating 2): Updated the Baseline/Additional value for TCs BPP/SD/SGSIT/ATTR/BV-23-C – -25-C. TSE 27065 (rating 2): Updated the Baseline/Additional value for DUN/GW/SGSIT/OFFS/BV-01-C in the IOPT SDPR tests table. TSE 27459 (rating 2): Updated the Baseline/Additional value for TCs HID/DEV/SGSIT/ATTR/BV-05-C and -16-C.
14	p14	2025-07-08	Approved by BTI on 2025-05-28. Prepared for TCRL pkg100 publication.
	p15r00–r03	2025-07-14 – 2025-07-20	TSE 27956 (rating 4): Added new TC IOPT/HOGP/SR/GATTDB/BV-01-I and updated the TCMT accordingly. Updated the references list.
15	p15	2025-08-12	Approved by BTI on 2025-07-14. HOGP v1.1 adopted by the BoD on 2025-08-11. Prepared for supporting publication.
	p16r00–r10	2025-08-18 – 2025-10-09	TSE 27823 (rating 3): Updated the initial condition, test procedure, and expected outcome for IOPT/SR/COD/BV-01-I such that CoD tests allow for the IUT as Central. TSE 27936 (rating 4): Added two new TCs: IOPT/PBP/PBK/RCV/BV-07-I and IOPT/PBP/PBA/RCV/BV-06-I. Updated the TCMT accordingly. Added an LE Audio section to the Test Suite Structure. Updated the references list. Incorporated CR CSIS_TEST_CR_d1.1_r06. To account for the Coordinated Set Name feature enhancement in Coordinated Set Identification Service Specification v1.1, added new entries to the IOPT GATTDB tests TC Configuration table to include new TCs CSIS/SR/SGGIT/BV-07-C and -08-C. Incorporated IOPT-related CR supporting the CWS v1.0 adoption. Added two new TCs: IOPT/CWS/SR/GATTDB/BV-01-I and IOPT/CWS/SR/SGGIT/SDP/BV-01-I. Updated the IOPT SGSIT SDP tests, TCMT, and references accordingly.
16	p16	2025-11-04	Approved by BTI on 2025-10-16. CWP v1.0, CWS v1.0, CSIS v1.1, and CSIP v1.1 adopted by the BoD on 2025-11-03. Prepared for supporting publication.
	p17r00	2025-11-10	Incorporated IOPT-related CR supporting the VAS v1.0 adoption. Added two new TCs: IOPT/GVAS/SR/GATTDB/BV-01-I and IOPT/VAS/SR/GATTDB/BV-01-I. Updated the IOPT SGGIT GVAS and VAS tests, TCMT, and references accordingly.

Publication Number	Revision Number	Date	Comments
17	p17	2025-12-16	Approved by BTI on 2025-11-24. VAS v1.0 adopted by the BoD on 2025-12-15. Prepared for supporting publication.
	p18r00	2026-03-11	Incorporated IOPT-related CR supporting the HIDS v1.1 adoption. Added TCs HIDS/SR/SGGIT/CHA/BV-10-C and -11-C to the TC configuration for IOPT GATTDB tests.
18	p18	2026-05-05	Approved by BTI on 2026-03-27. HIDS v1.1 adopted by the BoD on 2026-05-04. Prepared for supporting publication.
	p19r00–r01	2026-04-16 – 2026-05-20	Work for p19 began after p18 content was finalized; publication of p18 occurred later due to internal processes. TSE 28706 (rating 2): In support of E28700, added TCs HFP/HF/SGSIT/ATTR/BV-06-C and HFP/AG/SGSIT/ATTR/BV-07-C to the TC configuration for IOPT SDPR Server tests.
19	p19	2026-06-23	Approved by BTI on 2026-05-27. Prepared for TCRL pkg104 publication.
	p20r00–r01	2026-06-02 – 2026-06-20	Incorporated IOPT-related CR supporting the TPMSS v1.0 adoption. Added new TC IOPT/TPMSS/SR/GATTDB/BV-01-I. Updated the TCMT and references accordingly.
20	p20	2026-08-11	Approved by BTI 2026-06-28. TPMSS v1.0 adopted by the BoD on 2026-08-10. Prepared for supporting publication.
